

Contactless Interfacing with DICOM using Leap Motion

Brian Notarianni

George Mason University

2016

Problem

- Operating Room is a Sterile Environment.
- Sterilizing a Surgeon's Hands Takes Time.
- Large Collection of 2D and 3D Scans.
- Mice cannot be Sterilized Fully.

- 1 Problem
- 2 DICOM Viewers
- 3 Leap Motion
- 4 Protocol Design
- 5 Gesture Recognition
- 6 Testing and Discussion

RadiAnt

DICOM Interaction Modes

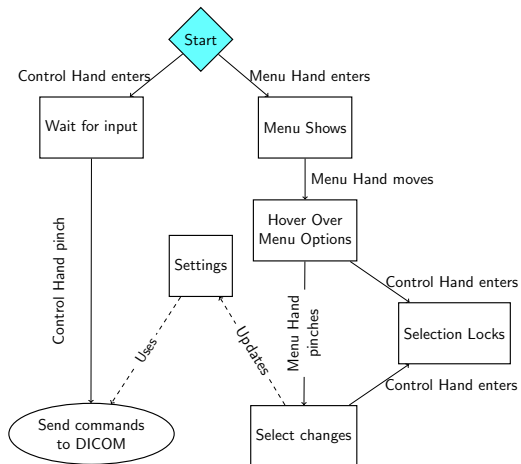

Modes	Icon	Default Mouse Button	Key Combo
Layer		Left Mouse Button	B
Brightness/Contrast		Middle Click	W
Pan		Shift + Left Mouse Button	M
Zoom		Right Mouse Button	Z
Measure (Length)		N/A	L

Leap Motion Bone Structure

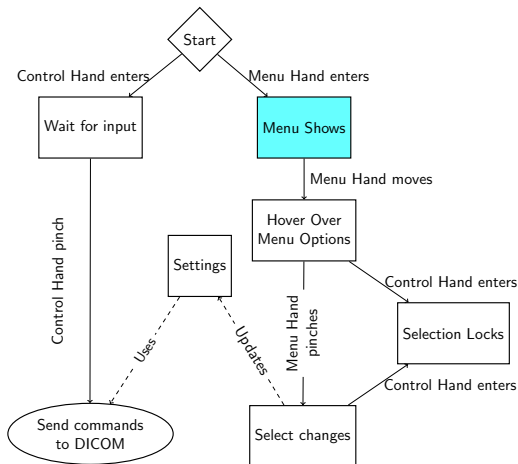

- Provides Hand Tracking at 30-115 *Frames* per Second.
- Two Inferred Stereoscopic Cameras
- Provides SDK in C#
- \$80 Consumer Device

Eigen Vectors as Hands

Mode	Negative	Positive	Description
First			General Tightness
Second			Thumb and Pointer Move in and out Together
Third			Thumb and Pointer Move in and out Alternating

V plotted as a scatter plot.

First 3 Columns of V , Gesture Templates in the US basis.

Gestures and their coordinates in V

Gesture	Example	Bone View	1	2	3
1			5.14	-5.16	0.80
2			2.60	2.90	1.12
3			-5.52	1.89	3.55
4			-5.99	0.11	-1.98

Gestures and their coordinates in V

Gesture	1	2	3
	5.14	-5.16	0.80
	2.60	2.90	1.12
	-5.52	1.89	3.55
	-5.99	0.11	-1.98

Recognition Times with Gloves

- User 1 Trains the System with 4000 points.

- All Used to Find

$$\mu, \sigma, X = USV^T$$

- 400 Used a Gesture Templates.

- User 1 & 2 Generating 4000 Points Using Stored μ, σ, US .

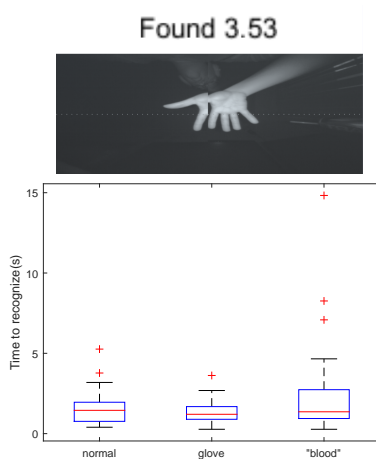

- k NN Used on this New Data and Stored Templates

Subject	4 class	1 vs all
User 1	87.44%	98.5%
User 2	94.27%	95.45%

Recognition Times with Gloves

- Timing Done with a Tool Written in Unity.
- Uses Leap Motions IR Image and Hand Count.
- Test Center Row's Brightest Pixel to Start a Timer.
- Uses Hand Count to Stop Timer.
- 30 Runs per Setup.
